**TESTIMONY OF THE CUSTOMER PANEL**

**NICOLE HOWARD, RASHEEDA DAVIS, KARSTEN BARDE,  
AND LAURI MANCINELLI**

1 **I. Introduction and Qualifications**

2 **Q. Please introduce the members of the Customer Panel.**

3 A. The Customer Panel is comprised of Nicole Howard, Rasheeda Davis, Karsten Barde, and  
4 Lauri Mancinelli.

5 **Q. Ms. Howard, please state your name and business address.**

6 A. My name is Nicole Howard. My business address is 2 Hanson Place, Brooklyn, NY 11217.

7 **Q. By whom are you employed and in what capacity?**

8 A. I am employed by National Grid USA Service Company, Inc. (“NGSC”) as Vice President  
9 of Customer Strategy and Growth. NGSC provides engineering, financial, administrative,  
10 and other technical support to subsidiary companies of National Grid USA, including  
11 Massachusetts Electric Company (“Mass. Electric”) and Nantucket Electric Company  
12 (“Nantucket Electric”) each d/b/a National Grid (together, the “Company”).

13 **Q. What are your principal responsibilities in your position?**

14 A. In my position, my responsibilities include overseeing the strategic execution of customer  
15 objectives across all National Grid USA operations in the U.S., including Mass. Electric  
16 and Nantucket Electric. I am responsible for overseeing customer experience strategy,  
17 market intelligence and customer analytics, segmentation and strategic market  
18 development, marketing and customer communications, web content and social media

1 channel management, customer experience products and programs, e-commerce, rapid  
2 results, and office of the president.

3 **Q. Please describe your educational background and professional experience.**

4 A. I received a Bachelor of Arts degree in Legal Studies from the University of California,  
5 Berkeley, in 1998. In 2003, I received a Master of Public Administration degree from  
6 California State University Dominguez Hills. I joined Sacramento Municipal Utility  
7 District in 2002 and for more than eighteen years held several roles of increasing  
8 responsibility in customer operations, distribution services, procurement and supply chain  
9 services, culminating as Chief Customer Officer in February 2015. In this role, I was  
10 responsible for corporate and customer communications, marketing, public relations,  
11 community engagement, supplier diversity, economic development, and all customer  
12 functions, including retail strategy, advanced energy solutions and financing, customer  
13 service programs, billing, credit and collections, revenue protection, and contact center  
14 operations. In November 2020, I joined Southern California Edison (“SCE”) as Vice  
15 President of Customer Programs and Services, where I was responsible for the strategy,  
16 planning and delivery of SCE’s energy efficiency (“EE”), demand response, electrification,  
17 and clean self-generation products and programs, as well as customer strategy, marketing,  
18 e-commerce, customer emergency response planning, climate equity, and strategic alliance  
19 functions. In 2021, I joined National Grid USA in my current position.

1 **Q. Have you previously testified before the Department of Public Utilities (the**  
2 **“Department”) or any other regulatory commissions?**

3 A. No, I have not previously testified before the Department or any other regulatory  
4 commissions.

5 **Q. Ms. Davis, please state your name and business address.**

6 A. My name is Rasheeda Davis. My business address is 2 Hanson Place, Brooklyn, NY  
7 11217.

8 **Q. By whom are you employed and in what capacity?**

9 A. I am employed by NGSC as Director of Market Segmentation and Growth.

10 **Q. What are your principal responsibilities in your position?**

11 A. In my position, my responsibilities include examining the various market segments, i.e.,  
12 residential, commercial and industrial (“C&I”), low- to moderate-income, and small and  
13 medium business at a micro level. The Market Segmentation and Growth team executes  
14 the fourth pillar of the U.S. Customer Strategy. This team tells the customer story as it  
15 relates to the market needs and wants by identifying the gaps and developing segmentation  
16 plans and utilizing customer verbatims and propensity models to drive product adoption.

1 By leveraging segment analysis, the Market Segmentation and Growth team is reimagining  
2 National Grid’s product portfolio and go-to market strategies.

3 **Q. Please describe your educational background and professional experience.**

4 A. I received a Bachelor of Science degree in Management in 2004 and a Master of Business  
5 Administration in Management in 2006 from Florida Agricultural and Mechanical  
6 University. Additionally, in 2014, I received a Master of Public Administration in  
7 Healthcare Policy and Management from New York University. The majority of my career  
8 prior to National Grid has been in the healthcare industry in pharmaceuticals and health  
9 insurance. I was employed by Horizon Blue Cross Blue Shield for four years, in which I  
10 initially served as an internal consultant to senior leadership on a diversity of high-level  
11 projects across the enterprise. In 2019, I was promoted to the Director of Pharmacy Special  
12 Projects, in which I was the subject matter expert for all pharmacy drug cost transparency  
13 initiatives for the enterprise and its health partners. I evaluated and provided  
14 recommendations about new technologies, led the implementation of these technologies,  
15 and developed strategies for maximum growth and savings. I joined National Grid in 2021  
16 as the Director of Commercial Portfolio Performance, where I was responsible for  
17 partnering with the product management teams – Clean Transportation, Distributed Energy  
18 Resources, and Customer Energy Management – to ensure their success and commerciality  
19 of products. This role entailed evaluating National Grid USA’s current products, services,  
20 Earnings Adjustment Mechanisms, and Performance Incentive Mechanisms (“PIMs”),

1 then identifying strategies to increase earnings and utilization. I assumed my role as the  
2 Director of Market Segmentation and Growth in April 2022.

3 **Q. Have you previously testified before the Department or any other regulatory**  
4 **commissions?**

5 A. No, I have not previously testified before the Department or any other regulatory  
6 commissions.

7 **Q. Mr. Barde, please state your name and business address.**

8 A. My name is Karsten Barde. My business address is 170 Data Drive, Waltham,  
9 Massachusetts 02451.

10 **Q. By whom are you employed and in what capacity?**

11 A. I am employed by NGSC as Director of U.S. Policy and Regulatory Strategy.

12 **Q. What are your principal responsibilities in your position?**

13 A. In my position, my responsibilities include analyzing public policy and advising National  
14 Grid's operating companies on the immediate and potential future business and customer  
15 impacts of public policy, with a particular focus on climate and clean energy transition  
16 issues. My work includes electric transportation, grid modernization, distributed  
17 generation, building decarbonization, future of gas, and energy affordability and equity,

1 among other issues. I also support the National Grid companies' work on public policy  
2 topics and engaging with policy stakeholders in emerging areas of interest.

3 **Q. Please describe your educational background and professional experience.**

4 A. I received a Bachelor of Arts degree in Geography and Government from Dartmouth  
5 College in 2004. In 2011, I received a Master of Business Administration degree with a  
6 focus on Strategy and Sustainability from Tuck School of Business at Dartmouth College.  
7 I joined Pacific Gas and Electric Company in 2011 and held roles in the Electric  
8 Technology and Information Strategy, Electric Operations Technology, and Energy  
9 Procurement groups. I have worked at National Grid for nine years in a variety of roles,  
10 including new product development, customer strategy, and regulatory strategy. In 2014,  
11 I joined National Grid as a Principal Program Manager in the Emerging Markets Strategy  
12 (New Energy Solutions) group. I was promoted to Acting Manager of New Customer  
13 Offerings in September 2017, before becoming the Principal Program Manager in the  
14 Regulatory and Customer Strategy department. In January 2021, I became a Principal  
15 Analyst, U.S. Policy and Regulatory Strategy. I assumed my current role as Director of  
16 U.S. Policy and Regulatory Strategy in April 2022.

17 **Q. Have you previously testified before the Department?**

18 A. Yes. I testified before the Department in D.P.U. 17-13, where I served as principal witness  
19 for the Phase 1 Electric Vehicle program. I have also testified before the New York Public  
20 Service Commission ("NYPSC") and the Rhode Island Public Utilities Commission. Most

1 recently, I testified before the NYPS&C as a witness for the Climate Leadership and  
2 Community Protection Act Panel of the Brooklyn Union Gas Company and KeySpan Gas  
3 East Corporation's gas distribution rate cases in Case Nos. 23-G-0225 and 23-G-0226.

4 **Q. Ms. Mancinelli, please state your name and business address.**

5 A. My name is Lauri Mancinelli. My business address is 170 Data Drive, Waltham,  
6 Massachusetts 02451.

7 **Q. By whom are you employed and in what capacity?**

8 A. I am employed by NGSC as Principal Analyst, Regulatory Strategy.

9 **Q. What are your principal responsibilities in your position?**

10 A. In my position, my responsibilities include developing and executing regulatory strategies  
11 for National Grid's operating companies, including Mass. Electric and Nantucket Electric,  
12 in areas such as rate design, electrification, distributed energy resources, and clean energy  
13 transition, among other areas.

14 **Q. Please describe your educational background and professional experience.**

15 A. I received a Bachelor of Arts degree in Economics from Bates College in 2000. In 2007, I  
16 received a Master of Environmental Management, Environmental Economics and Policy  
17 degree from the Duke University Nicholas School of the Environment. From 2007 through  
18 2012, I worked in various consultant roles focusing on energy and the environment,  
19 including at Charles River Associates and Synapse Energy Economics. From April 2012

1 to June 2015, I worked at Belmont Municipal Light Department as an Energy Resources  
2 Manager, where I worked to develop energy resources policies and customer-facing  
3 programs. In June 2015, I joined National Grid as a Lead Analyst in the Regulatory  
4 Strategy group and was promoted to Principal Analyst in 2018.

5 **Q. Have you previously testified before the Department or any other regulatory**  
6 **commissions?**

7 A. No, I have not previously testified before the Department or any other regulatory  
8 commissions.

9 **II. Purpose of Testimony**

10 **Q. What is the purpose of your testimony?**

11 A. The purpose of our testimony is to introduce several customer-focused proposals expected  
12 to improve customer affordability and enhance customer experience. First, the Company  
13 is seeking approval of a series of proposals to address energy affordability and equity for  
14 its low-income customers. These proposals are centered around a multi-tiered low-income  
15 bill discount for customers on Residential Low-Income Retail Delivery Service Rate R-2  
16 (“Rate R-2”) based on income levels, with five discount tiers ranging from a low of 32  
17 percent to a high of 55 percent depending on the customer’s income bracket (“Low-Income  
18 Discount”). In addition, the Company is seeking an incremental \$3 million per year so that  
19 the Company can provide targeted education and outreach to low-income customers and  
20 increase low-income program enrollment. The Company is also seeking to add an  
21 incremental 10 full-time equivalents (“FTEs”), who will be dedicated low-income

1 resources to help increase participation, assist customers, develop and execute low-income  
2 strategies, process customer applications, and implement the Rate R-2 discount. The  
3 Company also proposes to implement a symmetrical performance incentive based on  
4 customer enrollment growth in Rate R-2. The Company proposes to recover all proposed  
5 low-income program costs, including the hiring of the incremental FTEs, through the  
6 existing Residential Assistance Adjustment Factor (“RAAF”), rather than through base  
7 rates.

8 Second, the Company is proposing the addition of a Customer Account Management  
9 organization to provide increased education, outreach, and engagement for commercial,  
10 industrial, and institutional customers. The Customer Account Management proposal is  
11 seeking the addition of 23 FTEs to serve as the primary point of contact at National Grid  
12 for the account management needs of large end-use customers, national accounts,  
13 municipal and governmental accounts, property managers, real estate developers, and  
14 distributed generation (“DG”) developers.

15 Third, the Company is proposing to implement a new “Electrification Pricing” option  
16 within the residential customer class that will be made available on an opt-in basis to all  
17 customers on the Company’s Residential Regular Retail Delivery Service Rate R-1 (“Rate  
18 R-1”). Under Electrification Pricing, the per kilowatt-hour (“kWh”) base distribution  
19 charge is replaced with a fixed distribution charge, while all other charges – including the  
20 customer charge, all surcharges and adjustment factors included in the distribution line

1 item on the bill, transition charge, EE charge, renewables charge, distributed solar charge,  
2 electric vehicle program factor, transmission charge, and basic service supply or  
3 competitive supply charges – remain as applicable on Rate R-1. The proposed  
4 Electrification Pricing option is designed to support electrification in the Commonwealth,  
5 as well as to provide customers with options for affordability and bill stability. The  
6 Electrification Pricing option also serves as an incremental first step toward more cost-  
7 reflective rate design as the Company works toward Advanced Metering Infrastructure  
8 (“AMI”)-enabled innovative rate designs.

9 **Q. How is your testimony organized?**

10 A. Our testimony is organized into the following sections. Sections I and II are the  
11 introductory sections of our testimony. Section III provides an overview of the Customer  
12 organization. Section IV presents the Company’s proposals to better support energy  
13 affordability for low-income residential customers. Section V discusses the Company’s  
14 proposal to create a new Customer Account Management organization focused on  
15 commercial customers. Section VI presents the Company’s proposed opt-in Electrification  
16 Pricing open to all Rate R-1 customers. Section VII is the conclusion.

17 **Q. Are you sponsoring any exhibits as part of your testimony in this case?**

18 A. Yes. We are sponsoring the following exhibits in our testimony:

<b>Exhibit</b>	<b>Description</b>
Exhibit NG-CP-1	Testimony of Customer Panel
Exhibit NG-CP-2	Rate R-2 Implementation Cost Summary
Exhibit NG-CP-3	Low-Income Discount Tier Design Analysis
Exhibit NG-CP-4	LMI Market Segment Ethnography Study
Exhibit NG-CP-5	Customer Enrollment in Existing Assistance Programs
Exhibit NG-CP-6	Low-Income Dedicated FTE Job Descriptions
Exhibit NG-CP-7	Outreach and Education Program Proposal

1

2 **III. Customer Organization**

3 **Q. What is the role of the Customer organization?**

4 A. National Grid’s Customer organization supports the Company in serving its residential and  
5 C&I customers. The Customer organization often serves as the direct point of contact for  
6 the Company’s customers, including low-income customers, residential customers, and  
7 C&I customers, among others. Its mission is to uphold customers’ desire for safe, reliable,  
8 and affordable energy and act as a partner in the clean energy transition. With customer  
9 expectations quickly evolving, the Customer organization is focused on continually  
10 improving how to meet customers’ service and energy-related needs in an efficient manner.  
11 The Customer organization strives to interact in a transparent, proactive, personalized, and

1 relevant way for the Company's customers, working together with all National Grid  
2 employees to do everything with the customer in mind.

3 **Q. What is the structure of the Customer organization?**

4 A. The Customer organization includes a variety of departments that serve various aspects of  
5 the customer experience, including:

- 6 • Contact Centers, which deliver the majority of the Company's direct customer  
7 service interactions and queries.
- 8 • Billing, Collections, Controls, and Compliance, which is responsible for timely and  
9 accurate billing, processing of payments, and minimizing of bad debt for the  
10 Company's customers, and also for overseeing implementation of rate plans, billing  
11 models – including complex billing – and process automation.
- 12 • Sales and Solutions, which delivers energy solutions to C&I, residential, and low-  
13 income customers across the Company's service territory.
- 14 • EE Program Management, which delivers EE by connecting the market, the  
15 Company's activities, and customer expectations.
- 16 • Customer Strategy and Growth, which provides marketing and strategic services,  
17 such as market intelligence, customer insights, customer communications,  
18 segmentation strategy, and consultation, to ensure the Company is being Customer  
19 Centric and implementing data driven solutions to increase enrollment and  
20 awareness of the Company's products and programs.
- 21 • Transformational Programs, which is responsible for designing, developing, and  
22 implementing large foundational programs to build the business and Information  
23 Technology ("IT") capabilities necessary to deliver greater value to customers and  
24 an improved experience.
- 25 • Planning and Performance, which oversees strategic planning initiatives, tracks  
26 project milestones, and measures the performance of the Customer group through  
27 the creation of departmental metrics.

1 **Q. What are the key strategies and initiatives of the Customer organization?**

2 A. In the utility sector and beyond, customer expectations have undeniably increased.  
3 Customers expect the Company to keep electricity flowing with minimal interruptions.  
4 Customers also expect new and existing service requests to be seamless and well-  
5 coordinated with internal transactions by the Company and periodic communications back  
6 to the customer in a reasonable timeframe and in a variety of mediums. National Grid’s  
7 “Customer Transformation” strategy focuses on customer centricity as the key to success.  
8 Customer centricity includes fixing key recurring issues, advancing digital channels,  
9 transforming the Company’s relationship with business customers, and growth through  
10 bundled offerings and additional customer products aligned with customer segments. The  
11 Company strives to deliver a better holistic customer experience, while also addressing the  
12 affordability pressures customers experience on a daily basis, not only through inflation  
13 and general market conditions, but also those driven by the investments needed to support  
14 a clean energy transition.

15 As part of its overall “Customer Transformation” strategy, National Grid instituted six  
16 strategic priorities: (1) to improve the technical foundation; (2) to drive operational  
17 excellence; (3) to establish digital-first solutions; (4) to grow program reach and impact  
18 through improved segmentation and engagement; (5) to foster a culture of customer  
19 centricity; and (6) to enhance controls and risk management. These priorities support the  
20 goals of improving customer satisfaction and enabling customer uptake of energy  
21 solutions.

1 National Grid is committed to placing the Customer and Community at the heart of its  
2 business. Through its future initiatives, National Grid aims to make a step change in its  
3 customer centricity. These initiatives focus on inclusion of front-line employees in  
4 customer centricity, addressing key recurring customer “pain points,” advancing the  
5 Company’s digital channels, and transforming the Company’s relationship with business  
6 customers. All this will be underpinned by strengthening two-way communication – both  
7 among Company employees, and with its customers. More broadly, executing on these  
8 initiatives will deepen customers’ trust and willingness to engage with the Company, and  
9 programs that support customer needs and adoption of clean energy technologies and  
10 solutions, strengthen the Company’s community and regulatory engagement to be more  
11 responsive to and reflective of customer needs, and ensure that no customers are left behind  
12 as the Company leads the energy transition.

13 The six strategic priorities of the Customer Transformation strategy are as follows. First,  
14 the Company aims to improve the technical foundation. The major initiatives of this  
15 priority include: (1) modernize the Company’s legacy back-end systems; (2) strengthen the  
16 Company’s call center technology; (3) deliver the Company’s Unified Web Portal which  
17 will deliver a modern customer web portal experience and simplify transactions; and (4)  
18 build a central Customer Data Platform to simplify access to customer data.

19 Second, the Company will drive operational excellence through its Zero-Based Redesign  
20 program. Here, the Company will optimize the service delivery model through back-office

1 modernization; strengthen the Company's core capabilities to drive operations  
2 performance; and streamline processes, including increased automation to save manual  
3 hours and average handle time.

4 Third, the Company will look to establish digital-first solutions. Here, the Company aims  
5 to execute its digital product operating model, with an increased shift to digital ways of  
6 working. Additionally, the Company will build out AMI to drive energy insights and  
7 solutions for our customers.

8 Fourth, the Company aims to grow through segmentation and go-to-market strategy.  
9 National Grid will operationalize account management along with organizing and  
10 executing product development based on segments using the analytics data it possesses on  
11 its customers. This will help the Company reimagine the product portfolio, with the goal  
12 of creating a bundle of products with compelling value propositions that will meet each  
13 segments' needs.

14 Fifth, National Grid will look to foster a culture of customer centricity in the following  
15 ways: (1) embedding this culture change into ways of working; (2) driving the voice of  
16 the customer into the operating model; and (3) by enabling a 360-degree view of the  
17 customer to meet their evolving expectations.

18 Lastly, National Grid will look to enhance controls and manage risk by: (1) cultivating a  
19 culture of compliance; (2) preventing, detecting, and mitigating any ethical and regulatory

1 risks; and (3) by implementing policies and procedures that monitor and prevent non-  
2 compliance.

3 **Q. Does the Customer organization anticipate addressing the challenges relating to the**  
4 **implementation of clean energy goals and the clean energy transition?**

5 A. Yes. The Company is committed to addressing climate change and advancing clean energy  
6 solutions for its customers. With the challenges presented by climate change and the  
7 expanded electrification of the economy and our customers' daily lives, more is needed  
8 from the Company and its customers to meaningfully change the current climate trajectory.  
9 Additionally, the Commonwealth issued a formal determination letter establishing net-zero  
10 greenhouse gas ("GHG") emissions as the Commonwealth's new legal emission limit for  
11 2050, and an 85 percent emission reduction below the 1990 level as a target.<sup>1</sup> This includes  
12 sector-specific emissions sublimits, including sublimits for electric power, residential  
13 heating and cooling, C&I heating and cooling, and transportation.

14 Further, the Commonwealth's investor-owned electric distribution companies are each  
15 required to develop and file with the Department an Electric Sector Modernization Plan  
16 ("ESMP") to support the clean energy transition, building and transportation  
17 electrification, GHG emissions reductions, and increased system reliability and resiliency  
18 for weather and disaster-related risks through distribution system improvements. Once  
19 approved, the Company's ESMP likely will direct additional electric distribution system

---

<sup>1</sup> Commonwealth of Massachusetts, Executive Office of Energy and Environmental Affairs, "Determination of Statewide Emissions Limits for 2050" (issued April 22, 2020).

1 investments, as well as new or enhanced customer offerings and interaction opportunities  
2 that the Company will implement. More details regarding the Company’s ESMP, which it  
3 has named the “Future Grid Plan,” is provided in the pre-filed direct testimony of the  
4 Comprehensive Performance and Investment Plan (“CPI Plan”) Panel, at Exhibit NG-  
5 CPIP-1.

6 While network and program investments are necessary to support the clean energy  
7 transition, the Company recognizes that they will lead to increased costs for customers.  
8 Low-income customers, who already experience high energy burdens, are the most  
9 vulnerable to these increasing costs. The Company’s proposals in this rate filing are  
10 intended to support low-income customers to address this challenge, including through the  
11 Low-Income Discount and additional resources to assist low-income customers with  
12 accessing available programs; increased and improved outreach and education to C&I  
13 customers through the Customer Account Management program; and a new Electrification  
14 Pricing option to support the Commonwealth’s electrification goals, while also helping  
15 with affordability and rate stability for residential customers.

16 **Q. Is the Company proposing any performance incentive mechanisms, or “PIMs,”**  
17 **related to customer engagement as part of its Performance-Based Ratemaking**  
18 **(“PBR”) proposal in this case?**

19 A. Yes. In the pre-filed direct testimony of the CPI Plan Panel, at Exhibit NG-CPIP-1, the  
20 Company is proposing two PIMs related to its customer engagement efforts, and one PIM  
21 addressing affordability for low-income customers. First, the Company is proposing a PIM

1 for Digital Customer Engagement to increase the number of transactions that are self-  
2 served by customers. The Company's goal for this PIM is to reach 10 million digital  
3 transactions per year over the five-year term of the CPI Plan, with a deadband of 9 million  
4 to 11 million digital engagement transactions each year. Any performance that achieves  
5 greater than 11 million digital transactions per year will earn an incentive of \$0.25 per  
6 digital engagement transaction up to a maximum of \$500,000 for 13 million digital  
7 transactions in any given year. Similarly, any performance that results in less than 9 million  
8 digital transactions will pay a penalty of \$0.25 per digital engagement transaction, up to a  
9 maximum penalty of \$500,000 for 7 million digital transactions. If this PIM is  
10 implemented, it will benefit customers by providing customers the ability to seamlessly  
11 conduct transactions with the Company. The Company will continue to drive value, build  
12 trust, and maintain customer satisfaction by building out and improving customer-centric  
13 solutions in the digital space.

14 Second, the Company is proposing a PIM for First Call Resolution to resolve customer  
15 inquiries during the initial call to reduce the need for customers to make repeat calls. The  
16 Company's annual goal for this PIM is to resolve 70 percent of all customer calls during  
17 the initial call. The Company proposes a deadband of 60 percent to 80 percent of first calls  
18 resolved each year. Any performance that resolves greater than 80 percent of first calls  
19 will earn an incentive of \$50,000 per percentage point above the deadband, up to a  
20 maximum of \$500,000 for 100 percent of first calls received in any given year. Similarly,  
21 any performance that results in less than 60 percent of first calls will pay a penalty of

1 \$50,000 per percentage point below 60 percent, up to a maximum penalty of \$500,000 for  
2 resolving 40 percent of first calls received. If this PIM is implemented, it will benefit both  
3 the Company and the customers through increased customer satisfaction because the  
4 Company will be able to resolve customer inquiries expediently, rather than taking up more  
5 of a customer's time than necessary by requiring multiple calls. The continuous  
6 improvement in this metric will enable the Company to provide prompt and holistic service  
7 to its customers, which, in turn, increases customer satisfaction.

8 Third, the Company is proposing a customer-related PIM addressing affordability for low-  
9 income customers, based on increased enrollment of low-income customers in Rate R-2.  
10 We describe this PIM in more detail in the next section of our testimony.

11 **Q. Is the Company proposing any scorecard metrics related to customer engagement as**  
12 **part of its PBR proposal in this case?**

13 Yes. In addition to the PIMs described above, the Company's CPI Plan Panel proposes  
14 two scorecard metrics related to its customer engagement efforts, both addressing customer  
15 experience. First, the Company is proposing a scorecard metric based on the results of a  
16 survey to all customers that measures overall customer satisfaction with the Company.  
17 Second, the Company is proposing a scorecard metric based on the results of a survey  
18 regarding communications during outages and emergency events that will be shared with  
19 customers following power outages.

1 **IV. Low-Income Customer Proposals**

2 **Q. What is the Company's approach to helping low-income customers with energy**  
3 **affordability?**

4 A. The Company recognizes that not all customers have the same ability to afford their  
5 monthly energy bills. Helping the most economically challenged customers with solutions  
6 that meet their individual needs and enhanced services that improve their daily lives is part  
7 of the Company's commitment to ensuring that all customers can afford the clean energy  
8 they and their families need. The Company is committed to supporting low-income  
9 customers and proactively delivering programs to assist them in identifying and securing  
10 assistance.

11 Low-income customers come from different life stages across the customer spectrum.  
12 They share an economic status that makes them eligible for specific programs, but they  
13 face an array of unique challenges that require multi-faceted and highly personalized  
14 engagement strategies.

15 To better serve low-income customers, it is important for the Company to understand them  
16 at a granular level, and develop holistic, equitable solutions to address the root causes of  
17 their challenges. Since the COVID-19 pandemic, National Grid increased efforts to  
18 support low-income customers, including placing a moratorium on shutoffs and deferred  
19 payment agreements. However, according to a report published by the National Consumer

1 Law Center,<sup>2</sup> more than three-quarters of a million Massachusetts residential customers  
2 still needed to catch up on their electric or gas bills at the end of December 2021.

3 In early 2022, National Grid hired E-Source, a research, consulting, and data science firm  
4 to conduct an ethnography study (Exhibit-NG-CP-4). The study aimed to gain a better  
5 understanding of National Grid’s most economically challenged customers across its  
6 Massachusetts and New York service territories and to help improve assistance programs  
7 for this customer segment. The study identified four customer groups based on the extent  
8 to which low- to moderate-income (“LMI”) customers struggle with their energy bills. The  
9 study also revealed other characteristics, such as billing and payment behaviors.

10 During the study period, a large portion of the LMI customer population remained current  
11 on their bills. However, customers in two of the cohorts fell behind on payments for a  
12 short period of time before catching up, while customers in the fourth cohort constantly  
13 struggled with large arrearage balances. This cohort had higher energy burdens, a higher  
14 likelihood of being disconnected, contacted the Company seven times more frequently for  
15 payment assistance compared to other cohorts, and made up the largest portion of arrearage  
16 balances. These customers need the most assistance. The study asked the participating  
17 customers to provide their input on a wide range of topics, including their energy usage,  
18 perception of their homes’ efficiency, and their interactions with National Grid. The survey

---

<sup>2</sup> [https://www.nclc.org/wp-content/uploads/2022/09/IB\\_MA\\_Arrears.pdf](https://www.nclc.org/wp-content/uploads/2022/09/IB_MA_Arrears.pdf).

1 found that LMI customers (1) come from a broad range of life stages and situations; (2) are  
2 challenged with home comfort, especially during extreme weather conditions; (3) want  
3 communication channel options and more flexible payment methods and timing; and (4)  
4 highly value a compassionate approach to their interactions. Additionally, many customers  
5 mentioned that they want financial assistance to pay their utility bills.

6 Ultimately, the research further revealed that there is an opportunity to provide greater  
7 assistance to three of the four LMI customer groups. This includes identifying and building  
8 innovative solutions to improve interactions and communications with these customers,  
9 increase their home comfort, better manage their energy usage, and accessing payment  
10 assistance programs.

11 While the Company has already begun utilizing the results of this study, the study will  
12 serve as a useful resource going forward to grow the reach and impact of existing low-  
13 income programs through improved segmentation and engagement, as well as to develop  
14 additional service offerings to help these customers stay current on their bills and reduce  
15 their energy burden.

16 The three building blocks of the Company's low-income program approach are:

- 17 1. **Internal and External Partnerships** for cohesive planning, development, and  
18 execution across product offerings for low-income customers.
- 19 2. **Products and Solutions** for improved customer engagement and customer  
20 experience.

1           **3. Education and Outreach** to raise awareness of program offerings and ensure an  
2           improved customer centric experience.

3           Properly targeting low-income households with information about the Company’s  
4           programs will help expand awareness and program adoption, and make their energy bills  
5           more affordable.

6   **Q.    What are the Company’s current programs and services available to low-income**  
7   **electric customers?**

8   **A.**Currently, the Company provides the following programs and services to its low-income  
9   customers:

10       **Low-Income Discount:** A fixed 32 percent discount on a customer’s entire electricity bill.  
11       Residential customers at or below 60 percent of the state median income (“SMI”) are  
12       eligible for Rate R-2 and the low-income discount.

13       **Arrearage Management Plan (“AMP”):** A program that permanently forgives a portion  
14       of a customer’s arrearages if the customer makes timely payments pursuant to a payment  
15       plan. Low-income customers who are enrolled on Rate R-2, owe more than \$300, and are  
16       at least 60 days overdue on their electric bill are eligible for the AMP.

17       **Low Income Home Energy Assistance Program (“LIHEAP”):** LIHEAP is a federally  
18       funded program that assists with home energy bills. A LIHEAP grant is applied towards a  
19       customer’s heating source, based on income qualification performed by Community  
20       Action agencies (also referred to as Community Action Program agencies, or “CAP

1 agencies”). This is also a path for the customer to receive the Rate R-2 discount on their  
2 utility bill.

3 **Budget Billing:** A billing option for customers to balance payments across all 12 months  
4 to offset traditionally high winter heating and summer air conditioning peak bills. This  
5 helps make bills more predictable for customers and is available to all residential  
6 customers.

7 **Income-Eligible EE Offerings:** EE measures – including insulation, air sealing, efficient  
8 thermostats, heating system repair or replacement, lighting, and approved appliance  
9 replacement – are provided at no costs up to established limits. All customers on Rate R-  
10 2 are eligible for these products and services, as well as income-eligible multi-unit  
11 dwellings. “Income-eligible” generally refers to low-income customers.

12 **Shutoff protections:** In Massachusetts, utility customers are protected from disconnection  
13 for non-payment between November 15 and March 15. This protection is extended to  
14 residents of the home aged 65 and over, and residents experiencing financial hardship and  
15 who meet one of the following criteria: someone in the home is seriously ill or there is a  
16 child under 12 months old living in the home.

17 **Q. How does the Company currently promote programs and services available to low-**  
18 **income customers?**

19 **A.** The Company promotes low-income customer offerings through email campaigns, online  
20 banner ads, social media ads, and bill inserts; as well as through one-on-one customer

1 conversations with Call Center agents or Customer Advocates at in-person engagements.  
2 In addition, the Company partners with Community Action agencies in its service territory  
3 to promote energy affordability programs at the community level. These agencies leverage  
4 and integrate statewide resources from the Massachusetts Executive Office of Housing and  
5 Livable Communities (formerly the Department of Housing and Community  
6 Development) and also work closely with other community-based organizations as part of  
7 their outreach efforts.

8 **Q. What has the Company identified as opportunities for improvement for these**  
9 **programs and services?**

10 A. Through its efforts, the Company has identified two main areas where it could further help  
11 low-income customers through its programs and services:

12 **Increased Enrollment:** While existing programs support low-income customers who are  
13 enrolled, there is an opportunity to reach additional eligible customers who do not receive  
14 assistance. The Company is proposing to build on long-standing successful efforts, such  
15 as the CAP agency partnerships and data-sharing for auto-enrollment, described further  
16 below, with expanded education and outreach resourcing and proactive planning to  
17 promote low-income programs and services to address this opportunity.

18 It is difficult to estimate the number of customers who are both technically eligible and  
19 practically able to utilize the range of low-income focused programs. As shown in Exhibit  
20 NG-CP-5, Customer Enrollment in Existing Assistance Programs, approximately 154,596

1 Mass. Electric and Nantucket Electric customers were enrolled in the R-2 rate as of  
2 September 2023. The Company estimates that approximately 390,000 household accounts  
3 in the Massachusetts service territory have incomes below 60 percent of SMI. This number  
4 is likely to overstate the number of residential customers who are reachable by programs,  
5 given important non-income factors that may prevent customers from being reachable by  
6 the programs, such as rental occupancy in buildings with utilities included in monthly rents.  
7 However, national research<sup>3</sup> demonstrates other barriers to enrollment – including lack of  
8 awareness and confusion about eligibility rules – could be overcome through expanded  
9 dedication of resources working together with experienced statewide groups such as the  
10 Massachusetts Low-Income Energy Affordability Network (“LEAN”) and community-  
11 based organizations.

12 **A More Equitable Rate R-2 Discount:** While the current Rate R-2 discount improves  
13 affordability for low-income customers, offering a tiered discount with higher discounts  
14 for lower income levels would make the rate more equitable. The goal of a tiered discount  
15 would be to keep the electric energy burden for the spectrum of low-income customers at  
16 approximately the same target level, by increasing the discount levels offered to the Rate  
17 R-2 customers in the lower income brackets. “Energy burden” refers to the percentage of  
18 gross household income spent on energy costs, and multi-tiered rates can be designed to

---

<sup>3</sup> See, for example, U.S. Dept of Health & Human Services, “LIHEAP Research Experiences of Selected Federal Social Welfare Programs and State LIHEAP Programs in Targeting Vulnerable Elderly and Young Child Households” available at <https://www.acf.hhs.gov/ocs/report/liheap-research-experiences-selected-federal-social-welfare-programs-and-state-liheap>.

1 place more low-income customers below the energy burden target. Other states, including  
2 New York, New Hampshire, Connecticut, Rhode Island, and California, provide two or  
3 more tiers for their low-income electric assistance programs, with higher support for the  
4 lowest income customers.

5 **Q. What is the Company proposing in relation to its low-income offerings?**

6 A. The Company proposes to implement (1) a multi-tiered low-income bill discount for the  
7 Rate R-2 customers, including new methods for verifying customer eligibility; (2) the  
8 hiring of incremental FTEs and implementation of an education and outreach program to  
9 increase low-income customer awareness and program enrollment; (3) cost recovery for  
10 these new costs via the existing low-income dedicated reconciling factor, the RAAF; and  
11 (4) a symmetrical affordability-based PIM related to the enrollment of new customers on  
12 Rate R-2.

13 **Q. What is the structure of the proposed Low-Income Discount?**

14 A. The proposed Low-Income Discount will take the form of a five-tiered discount rate  
15 structure for eligible low-income customers based on Federal Poverty Level (“FPL”) or  
16 SMI guidelines. The rate will keep the same eligibility threshold as the existing low-  
17 income discount rate of 32 percent – which is 60 percent of SMI or less – but offer higher  
18 discounts to customers at lower income levels, up to a maximum discount of 55 percent.  
19 The proposed discount tiers are designed to bring customers who have average electricity

1 consumption of 600 kWh per month within each income tier to below the target 3.4 percent  
2 energy burden for electricity.

3 The Company proposes the following tiers:

- 4 • 55 percent discount for households with incomes between 0 and 75 percent of  
5 FPL.
- 6 • 49 percent discount for households with incomes between 75 and 100 percent  
7 of FPL.
- 8 • 44 percent discount for households with incomes between 100 and 150 percent  
9 of FPL.
- 10 • 36 percent discount for households with incomes between 150 and 200 percent  
11 of FPL.
- 12 • 32 percent discount for households with incomes between 200 percent of FPL  
13 and 60 percent of SMI.

14 **Q. How was the target energy burden determined?**

15 A. The target energy burden is based on the American Council for an Energy Efficient  
16 Economy (“ACEEE”) 2020 Energy Burden Report, with the aim to reduce households’  
17 home energy burden below the designated high level of 6 percent. For gas heating  
18 customers, the 6 percent energy burden needs to be split to cover both their electric bill and  
19 their gas bill. After LIHEAP distributions are made, the low-income customer has spent  
20 56 percent of their home energy bills on electricity and 44 percent on gas. The electricity  
21 bill was then allocated 56 percent of the 6 percent energy burden, equal to 3.4 percent. This  
22 3.4 percent is then used to determine the discount rates in Exhibit-NG-CP-3.

1 **Q. What improvement in energy burden is achieved by the introduction of the tiered**  
2 **discount structure?**

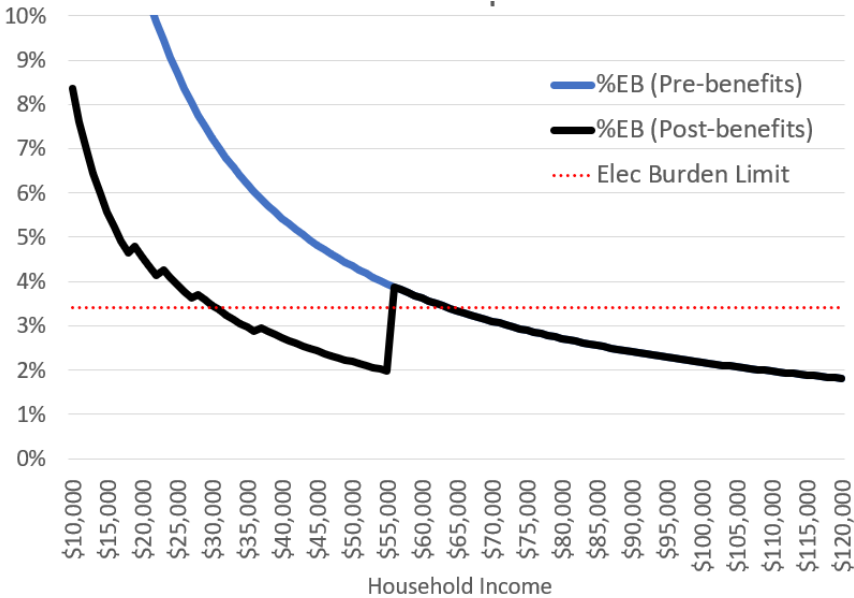

3 A. As shown in the diagrams below, for customers receiving both LIHEAP and the tiered R-  
4 2 electric discounts, the level of energy burden would generally fall below the target energy  
5 burden described above for customers below 60 percent of SMI.

6 Figure 1, below, shows the electric energy burden for a two person household after  
7 applying the existing LIHEAP and R-2 rate, and shows that energy burden (the black line)  
8 rises rapidly above the target level (the red level) for customers below 150 percent FPL,  
9 reaching as high as 8.5 percent of household income.

10 Figure 2, below, shows the electric energy burden after applying LIHEAP and the proposed  
11 tiered discount rate, and illustrates the reduction of energy burden reduction to the target  
12 level described above.

1

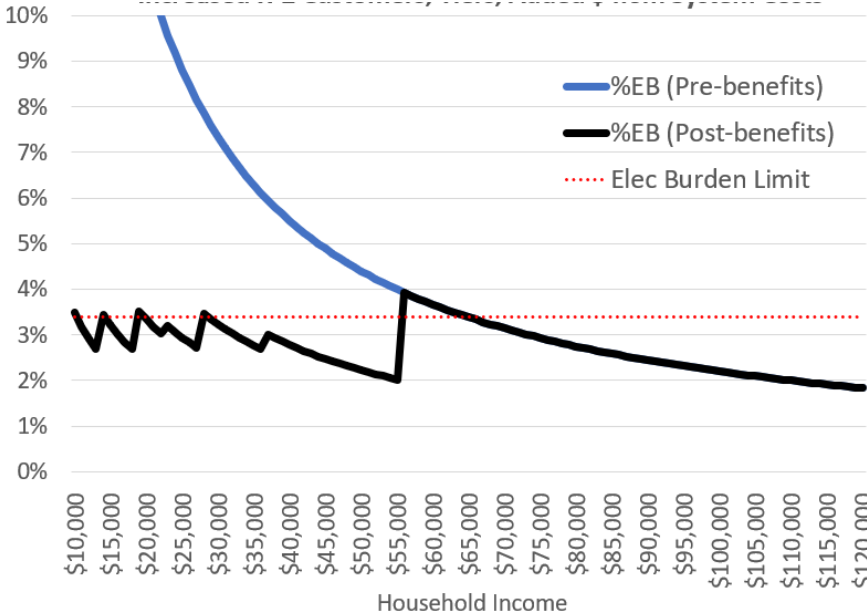

**Figure 1**

2

3

**Figure 2**

4

1 **Q. What are the direct costs associated with implementing a multi-tiered Rate R-2**  
2 **discount?**

3 A. The costs of providing a multi-tiered Rate R-2 discount result primarily from required  
4 billing system upgrades and FTEs. The estimated costs of upgrading the Company's  
5 billing system are included in Exhibit NG-CP-2. There are additional costs associated with  
6 verifying customer eligibility and increasing Rate R-2 discount enrollment, which are  
7 covered in later sections.

8 **Q. How will the Company verify eligibility for the Low-Income Discount?**

9 A. Offering a tiered discount rate will require new eligibility verification mechanisms because  
10 the current Rate R-2 discount requires only demonstration of income below 60 percent of  
11 SMI, and all eligibility verification is completed by third parties based on enrollment in  
12 means-tested programs. The Company proposes to pursue three new methods for verifying  
13 low-income customer eligibility, which will be non-exclusive options to maximize access  
14 to the offering. The Company has considered cybersecurity and privacy concerns about  
15 collecting detailed income data from customers in developing the following new methods.

16 **Method 1: Enhanced Data Sharing**

17 The first method of eligibility verification is to build on auto-enrollment through data  
18 sharing with the Department of Transitional Assistance and CAP agencies, through the  
19 implementation of new data sharing agreements that authorize the agencies to share the  
20 applicable discount tier for customers based on their records of customers' income from  
21 the customer qualification process. This process will not pass through customers' actual

1 incomes, but rather their applicable tier for the R-2 rate. The Company also will seek to  
2 replicate this process with additional agencies by establishing new data sharing agreements  
3 to automatically enroll additional groups of customers who are enrolled in other income-  
4 verified programs that do not currently share data for R-2 eligibility purposes.

5 The implementation costs for verification through data sharing consist of system upgrades  
6 for the Company and data sharing system upgrades for participating agencies. The costs  
7 for the Company's system upgrades are included in Exhibit NG-CP-2. The costs for  
8 participating agencies to upgrade their data sharing systems have been preliminarily  
9 estimated at approximately \$100,000. These costs are proposed to be paid by the Company  
10 and recovered via the RAAF.

11 **Method 2: Direct Application Showing Proof of Enrollment in Another Program**

12 The Company will continue to directly enroll applicants who show proof of participation  
13 in a qualified means-tested program into the default 32 percent discount, unless further  
14 information is provided demonstrating a higher tier should apply. A qualified means tested  
15 program is any state or federally funded program that has an eligibility limit of 60 percent  
16 of SMI or lower and directly verifies the income of the customers it enrolls.

17 The Company will also allow direct applicants to show proof of participation in any of the  
18 following to obtain the 36 percent discount rate: Supplemental Security Income ("SSI"),  
19 Supplemental Nutrition Assistance Program ("SNAP"), Women Infants and Children

1 (“WIC”), MassHealth Standard, CarePlus and Limited Customers, HeadStart, and  
2 Veterans Chapter 115 benefits.

3 Additionally, the Company will allow direct applicants of Transitional Aid to Families of  
4 Dependent Children (“TAFDC”) and Emergency Aid to the Elderly, Disabled and Children  
5 (“EAEDC”) to obtain the 49 percent discount rate.

6 There are no additional implementation costs for verification through direct application  
7 beyond the costs of implementing a multi-tiered discount rate and increasing Credit and  
8 Collection team FTEs to assist with the work, as described below.

9 **Method 3: Third-Party Verification of Applicants’ Income**

10 To provide an additional enrollment option for low-income customers who are not enrolled  
11 in other means-tested programs, the Company also proposes to contract a third-party  
12 income verifier to confirm applicants’ eligibility. The third-party verifier will rely on  
13 customer income documentation to confirm eligibility and place each customer within a  
14 discount tier. The implementation costs of third-party verification are estimated in Exhibit  
15 NG-CP-2, but the Company would need to issue a Request for Proposal (“RFP”) to get  
16 exact quotes from vendors.

1 **Q. How does the Company propose to increase awareness of and participation in**  
2 **programs to improve low-income customer affordability, including the Low-Income**  
3 **Discount Program?**

4 A. The Company proposes to implement a comprehensive low-income customer segment  
5 strategy to raise awareness and increase customer enrollment in assistance programs,  
6 streamline education and outreach to low-income customers, and develop products and  
7 services to improve their customer experience. To better connect our low-income  
8 customers with the assistance programs they need, it is critical that the Company  
9 understand the ethnicities, cultures, and other characteristics that make up this customer  
10 segment in the region. Many of our low-income customers who are not currently accessing  
11 assistance programs are from underrepresented ethnic, cultural, or language groups, so the  
12 Company must create a multi-cultural communication plan that extends beyond  
13 translations with visuals, messages, and tone of voice that is sensitive to cultural differences  
14 to ensure that the Company's program offerings will resonate with audiences of different  
15 cultural backgrounds.

16 All outreach and education materials are developed using a multi-cultural transcreation/in-  
17 culture process, which adapts concepts, visuals, and messages for various cultures that  
18 make up the low-income communities we serve, to ensure the content and desired actions  
19 resonate. To reach non-English speaking customers, we would expand translation efforts  
20 to include the top 3-5 languages spoken in the identified communities. All materials would  
21 be tested with our intended audience through online and/or in-person customer focus  
22 groups before finalizing content. The Company would work closely with and possibly

1 incentivize Community-Based Organizations (CBOs) to provide input to ensure concepts  
2 resonate and do not have any cultural misrepresentation. Next, the Company would  
3 develop an ongoing omni-channel outreach approach to ensure it is meeting customers  
4 where they are. A mix of high-touchpoint tactics, such as television, radio, and out-of-  
5 home/place-based media – including advertising that customers would encounter outside  
6 of their residences, such as billboards, posters, or signage that a customer would see while  
7 driving, shopping, commuting – combined with a presence in local community newspapers  
8 and in-person customer engagement events and activations, will enable the Company to  
9 reach all low-income customers in the communities where they live, work, and gather. This  
10 expanded approach would complement owned-channel communications (email, social  
11 media, bill inserts) as well as Mass Save EE marketing efforts which aim to increase  
12 participation and adoption of EE programs and reach energy saving targets.

13 **Q. Has the Company seen results from dedicated outreach and education campaigns to**  
14 **support low-income customers in the past?**

15 A. The Company believes that participation in current assistance programs can be  
16 meaningfully improved by dedicated focus and outreach to low-income customers. For  
17 example, when the Company developed its winter price mitigation plan in 2022, it utilized  
18 short-term funding approved by the Department to provide customer assistance aimed  
19 broadly at all customers needing additional support during a time of high commodity  
20 prices. During this time, the Company launched a campaign called the Customer Savings

1 Initiative to reach customers who may be struggling with winter bills. The initiative  
2 included 27 in-person outreach events across the Commonwealth.

3 The Customer Savings Initiative was well-received by the Company's customers and  
4 communities impacted by winter bills and generated positive results, including helping to  
5 increase Rate R-2 enrollments by more than 8,000 customers. The Company believes that  
6 a dedicated budget, dedicated resources, and a comprehensive, long-term outreach and  
7 education effort will enable the Company to reach more low-income customers with  
8 information about all of its programs and help to address remaining enrollment barriers  
9 among this customer segment.

10 **Q. What is the anticipated cost for the improved outreach and education for the low-**  
11 **income customer segment?**

12 A. The Company is seeking an increase of \$3 million per year to implement the proposed  
13 annual outreach and education program for low-income customers. The annual amount  
14 will support the development of a multi-cultural communication plan; the creative  
15 development, execution, and testing of in-language/transcreated assets; and an omni-  
16 channel approach, which includes broad awareness tactics like television ("TV") and radio,  
17 to targeted delivery mechanisms like expanded in-person customer and community events.

18 The costs for this work include:

- 19 • A total of \$1,150,000 media spend across TV, Radio/Audio, and Out-of-  
20 Home/Place-based media:

- 1                   ○ TV: traditional network and cable (i.e., Boston – WUNI Univision  
2                   WNUE Telemundo) and hyper-targeted streaming TV by zip code in  
3                   three to five week flights. Estimated cost: \$15,000 per week for  
4                   traditional TV; \$20,000 per month for streaming services.
  
- 5                   ○ Radio/Audio: terrestrial, targeted streaming and podcasting. Estimated  
6                   cost: \$1,200 per station per week for terrestrial; \$15,000 to 25,000 per  
7                   month for streaming.
  
- 8                   ○ Out-of-home/Place-based media: billboards, posters, murals, flyers, or  
9                   door hangers in frequented localized destinations, including transit/bus  
10                  kiosks, community centers, hairdressers, barbershops, grocery stores,  
11                  and convenience stores.
  
- 12                 • Digital: targeted rich media, video, native ads, social media, search, and  
13                 influencer marketing. Estimated cost: \$50,000 per month, for a total of  
14                 \$600,000 annually.
  
- 15                 • In-person customer assistance events, community activation kits, customer  
16                 engagement pop-ups, presence at local community and senior centers, and CAP  
17                 agency events, with on-site translators. Estimated costs: \$500,000 to \$750,000  
18                 per year, dependent on type of event, location, and frequency.
  
- 19                 • All outreach and education materials would be created in the top three to five  
20                 languages through a multi-cultural transcreation/in-culture plan and process.  
21                 This includes working with Community Based Organizations and translation  
22                 agencies and testing all concepts with in-person customer focus groups.  
23                 Estimated cost: \$500,000 per year.

24                 With a new multi-tiered discount rate, the additional outreach and education support will  
25                 be needed to drive enrollment and educate customers on the new rate structure. For this  
26                 reason, the first year of implementation of the redesigned Rate R-2 may cost more than  
27                 subsequent years. A summary of annual outreach and education costs is provided in  
28                 Exhibit-NG-CP-2, Rate R-2 Implementation Cost Summary. Please also see Exhibit NG-  
29                 CP-7, which is an overview of the Company’s Outreach and Education Program.

1 **Q. Does the Company need to add incremental staff to support the work involved in**  
2 **providing the Low-Income Discount and other low-income offerings?**

3 A. Yes. Currently, the Company has only one FTE dedicated to strategy development,  
4 research, and program design for LMI customers, supporting more than 800,000 LMI  
5 electric and gas customers, and those customers who are residents of environmental justice  
6 communities (“EJCs”) in the Company’s Massachusetts service territories. As of the 12  
7 months ending March 31, 2023 (“Test Year”), the Company also has six Customer  
8 Advocates dedicated to assisting the Company’s most economically challenged customers.  
9 These Customer Advocates cover the entire Mass. Electric, Nantucket Electric, and Boston  
10 Gas Company service territory and are paired by region to support the demand and foster  
11 relationships within the communities they serve. Customer Advocates spend most of their  
12 time at local service organizations enrolling customers in programs and providing  
13 information about assistance programs.

14 To further assist low-income customers, the Company proposes to add seven low-income-  
15 dedicated FTEs to support the development and execution of program offerings, targeted  
16 customer outreach, segment research, program performance measurement, and direct one-  
17 on-one customer assistance for low-income customers. These FTEs would be dedicated to  
18 supporting the Company’s low-income Massachusetts residential electric customers.  
19 Included in these seven low-income dedicated FTEs are three Customer Advocates; one  
20 Marketing, Education, and Outreach Analyst; one Data Analyst; one Payment Assistance  
21 Administrator; and one Segment Analyst. These FTEs will be essential in reaching,

1 educating, and enrolling customers in payment assistance programs. A description of each  
2 FTE's responsibilities is included in Exhibit-NG-CP-6.

3 To process the expected increase in direct application enrollments and to test and  
4 implement the revised Low-Income Discount structure, the Company proposes to add three  
5 additional dedicated FTEs, consisting of two Revenue Service Associates and one Billing  
6 Operations, Senior Analyst. These FTEs will be dedicated to implementing the Rate R-2  
7 discount for the Company's low-income Massachusetts residential electric customers. A  
8 description of the responsibilities of these FTEs is included in Exhibit-NG-CP-6.

9 **Q. What is the estimated cost of hiring the new low-income-dedicated FTEs?**

10 A. The Company is seeking the recovery of approximately \$1.25 million in operating  
11 expenses associated with the hiring of an incremental 10 FTEs dedicated to low-income  
12 customers and programs. The breakdown of these costs is detailed in Exhibit-NG-CP-2.

13 **Q. Does the incremental increase in staff reflect the normal ebb and flow of staffing?**

14 A. No. The incremental FTEs represent a significant increase in low-income program staffing  
15 that the Company anticipates will continue to be needed to enable effective low-income  
16 customer support through the outreach, engagement, and new discount structure described  
17 above. The current level of staffing is not sufficient to support these necessary endeavors.

1 **Q. Does the addition of the incremental staff reflect a permanent change within the**  
2 **Customer organization?**

3 A. Yes. Prior to this filing, the Customer organization did not have a dedicated team to serve  
4 low-income customers and EJCs for the Company. The Company has only one full-time  
5 employee who is responsible for developing and executing a strategy for the long-term  
6 support of low-income customers. With the expansion of this team as proposed in this  
7 case, the Company will be able to implement a comprehensive plan to support its low-  
8 income customers. The team will track the performance of payment assistance programs,  
9 such as the low-income discount rate and AMP, and identify gaps and areas for  
10 improvement. Additionally, the team will monitor the performance and progress of these  
11 initiatives, research and benchmark new initiatives, and evaluate other utility offerings that  
12 could benefit low-income customers and EJCs.

13 To fully serve low-income customers, it is imperative that the proposed FTEs represent a  
14 permanent addition to the Customer organization. Adequate resourcing will ensure  
15 positive experiences for customers through all engagement channels, and at every step of  
16 the customer journey – from awareness to application to participation and re-enrollment.  
17 It will also ensure strong Company presence at the local level, through greater in-person  
18 events and partnership with community-based organizations. In addition, the Company  
19 expects the needs of this customer segment to evolve, and the proposed FTEs will continue  
20 to reevaluate programs, services, and education campaigns targeted to this segment to reach  
21 these customers and provide payment assistance support. This approach is needed given

1 the differentiated needs of low-income customers. This segment has been historically  
2 underserved and the Company recognizes the need for a permanent increase in staffing to  
3 more effectively meet the needs of these customers, in line with the Commonwealth's focus  
4 on equity and affordability.

5 **Q. Will the proposed Low-Income Discount require changes to the Company's systems?**

6 A. Yes, the Company's systems will need updates in order to support a multi-tiered low-  
7 income discount. The current Rate R-2 is programmed for a single discount tier and will  
8 require reprogramming of the billing system to include riders for five discount tiers. The  
9 Company's data sharing system with agencies will require modifications to track (a) each  
10 customer's income tier, and (2) whether a customer has moved between discount tiers. A  
11 summary of these costs is included in Exhibit NG-CP-2.

12 **Q. When does the Company intend for the new tiered discount to become operational?**

13 A. The Company intends for the multi-tiered discount rate to become operational no later than  
14 June 2025, as the Company makes the necessary modifications to the Company's internal  
15 systems and processes. The Company's ability to meet this target also depends on the  
16 necessary systems and processes being operational with data sharing agencies and a third-  
17 party income verifier. The Company will begin efforts to increase enrollment in low-  
18 income programs and services as soon as the proposal is approved.

1 **Q. How does the Company propose to recover incremental costs associated with low-**  
2 **income offerings?**

3 A. The Company proposes to recover all incremental costs associated with assistance  
4 programs offered to low-income customers through the RAAF, including the proposed  
5 multi-tiered Low-Income Discount, the hiring of incremental FTEs dedicated to the low-  
6 income customer segment, and the enhancements to low-income customer outreach and  
7 education. The RAAF currently recovers the costs of the existing discount provided to  
8 customers receiving retail delivery service under Rate R-2 and the incremental costs  
9 associated with the operation of the Company’s AMP offered to qualifying customers. It  
10 does not currently recover the cost of FTEs dedicated to low-income customer support,  
11 such as Customer Advocates, or low-income customer education and outreach; however,  
12 the Residential Assistance Adjustment Provision (“RAAP”) indicates that costs regarding  
13 assistance provided to low-income customers may be included if permitted by Department  
14 order.

15 Therefore, the Company proposes to include all incremental costs related to its low-income  
16 proposals in this proceeding in the RAAF, instead of in base rates, in order to provide  
17 dedicated recovery for the costs of this important work. Recovering these costs via the  
18 RAAF, including the costs for hiring the incremental FTEs dedicated to low-income  
19 customers and programs, should provide greater transparency into the Company’s low-  
20 income initiatives. Recovery through the RAAF, instead of in base rates, will enable the  
21 Company, the Department, the Attorney General, and any other interested stakeholders to

1 directly track and evaluate the Company's increased efforts dedicated to support low-  
2 income customers and increased participation in Rate R-2 and other programs.

3 **Q. Does the Company intend to cap the recovery of labor costs and other operating**  
4 **expenses under this proposal?**

5 A. Yes, the Company proposes to cap the amounts of annual education and outreach spending,  
6 as well as associated FTE labor costs, recovered via the RAAF under this proposal up to a  
7 total amount of \$4.25 million per year.

8 The Company does not propose to cap recovery via the RAAF related to implementation  
9 of the multi-tiered discount, including internal and external system costs and Credit and  
10 Collections FTEs, given that these costs are preliminary high-level estimates at this time.

11 **Q. Does the Company need to make any associated changes to its tariffs to implement**  
12 **the low-income offerings proposed in this case?**

13 A. Yes, the Company will need to modify the Rate R-2 tariff to implement the proposed Low-  
14 Income Discount. Additionally, the Company will need to modify the RAAP to allow for  
15 the recovery of the additional costs relating to the low-income offerings discussed above.  
16 Copies of the amended tariffs are provided in the pre-filed direct testimony of the Pricing  
17 Panel, as Exhibit NG-PP-13 and Exhibit NG-PP-14.

18 **Q. What are the estimated bill impacts associated with the Company's Low-Income**  
19 **Discount and outreach and education efforts?**

20 A. As shown in Table 1, below, the Company estimates that for Year 1, the increase in total  
21 costs reaches \$20.1 million, which includes costs for increased enrollment and system

1 upgrade costs for the full year and the costs for the multi-tier discount when it is  
2 implemented for the final four months of the year. In Year 2, the multi-tiered discount rate  
3 will be in effect for the full year, increasing total costs to \$46.5 million.

4 **Table 1 – Cost of Low-Income Customer Proposals**

	Year 1	Year 2	Year 3	Year 4	Year 5
	Oct. 2024 - Sep. 2025	Oct. 2025 - Sep. 2026	Oct. 2026 - Sep. 2027	Oct. 2027 - Sep. 2028	Oct. 2028 - Sep. 2029
Multi-Tier Discount for existing customers	\$10,933,333	\$32,800,000	\$32,800,000	\$32,800,000	\$32,800,000
Increased Enrollment	\$3,100,000	\$6,200,000	\$9,300,000	\$12,400,000	\$15,500,000
+ Second Order Effects	\$463,333	\$2,780,000	\$4,170,000	\$5,560,000	\$6,960,000
Outreach & Education	\$3,000,000	\$3,000,000	\$3,000,000	\$3,000,000	\$3,000,000
Low-Income Dedicated FTEs	\$1,235,000	\$1,235,000	\$1,235,000	\$1,235,000	\$1,235,000
Third Party Verification Costs	\$175,000	\$525,000	\$525,000	\$525,000	\$525,000
System Upgrade Costs	\$1,169,000	\$0	\$0	\$0	\$0
<b>Total Costs</b>	<b>\$20,075,667</b>	<b>\$46,540,000</b>	<b>\$51,030,000</b>	<b>\$55,520,000</b>	<b>\$60,020,000</b>

5 Multi-Tier Discount comes into effect in June 2025, meaning no Multi-Tier and Second Order Effects Costs occur until this date.  
System Upgrade Costs include \$1,069,000 for National Grid IT costs and \$100,000 for agency costs.

6 In Year 5, a multi-tiered discount rate with the tiers proposed above would increase the  
7 Rate R-2 discount value by an estimated \$32.8 million per year. This represents an increase  
8 of 29 percent from the value of the current flat 32 percent low-income discount. If  
9 enrollment in Rate R-2 also grows based on expanded outreach, the size of the program  
10 and associated discount value would grow accordingly. For example, the low-income PIM  
11 proposed below targets a 15 percent increase in enrollment over the five years that would  
12 lead to \$15.5 million in additional program costs in the program’s fifth year. If the  
13 Department approves the proposed multi-tiered discount, FTEs, outreach and education  
14 funding, system upgrade costs, third party verification costs, and enrollment increased by  
15 15 percent, the total program-related costs would increase from the current \$113 million to

1           \$173 million in the fifth year. This corresponds to a monthly bill increase of \$2.47, or 1.3  
2           percent, for an average residential customer. A summary of the program's year-by-year  
3           costs is included in Exhibit NG-CP-3.

4   **Q.   How does the Company propose to measure its performance in implementing the**  
5   **Low-Income Discount?**

6   A.   The Company proposes to implement an affordability-based PIM to encourage innovation  
7           and ensure accountability for performance in support of increasing the enrollment of low-  
8           income customers in the Company's Rate R-2. The Company's target is to enroll 4,650  
9           new customers in Rate R-2 each year over the five-year term of the CPI Plan, which would  
10          be an annual increase of 3 percent over the baseline of customers enrolled as of June 2023.  
11          By contrast, the annual average growth in enrollment over the last five years has been 0.6  
12          percent per year – or five times lower than the Company's annual PIM target.

13          Achieving the 3 percent goal will require increased resources, including additional FTEs  
14          and increased outreach and targeted enrollment of low-income customers into Rate R-2, so  
15          that those customers can take advantage of the proposed tiered Low-Income Discount  
16          program and other low-income program offerings. The Company cannot adequately carry  
17          out the work in the Low-Income Discount proposal with its existing resources. As a result,  
18          this proposed PIM is contingent on approval of the outreach and education funding and the  
19          FTEs included in this proposal.

1 Although the Company has promoted a Rate R-2 discount for years, significant barriers  
2 remain that prevent eligible customers from enrolling in the low-income discount program,  
3 including awareness of program offerings, eligibility, and ways to enroll; accessibility; and  
4 language barriers. The Low-Income Discount PIM will encourage the Company to ensure  
5 ongoing dedicated focus on growing Rate R-2 enrollment, with a symmetrical incentive or  
6 penalty if the Company outperforms or falls short of the target.

7 The proposed PIM aligns with the Department's and the Company's shared goal of  
8 reducing the energy burden for low-income customers and will serve as an accountability  
9 mechanism to ensure the Company's proposed dedication of funds for outreach and  
10 education effectively addresses existing enrollment barriers for low-income customers to  
11 participate. More details regarding the Low-Income Discount PIM are provided in the pre-  
12 filed direct testimony of the CPI Plan Panel, at Exhibit NG-CPIP-1.

13 **V. Customer Account Management Proposal**

14 **Q. What is the Company's proposed Customer Account Management proposal?**

15 A. The Company proposes to expand its account management capabilities by creating a new  
16 Customer Account Management function within the Customer organization to serve as the  
17 primary point of contact for the account management needs of large end-use customers,  
18 national accounts, municipal and government accounts, property managers, real estate  
19 developers, and DG developers, among other groups.

1 **Q. Is the Company hiring any incremental FTEs to support the Customer Account**  
2 **Management organization?**

3 A. Yes. National Grid is in the process of hiring an incremental 23 FTEs to serve the new  
4 Customer Account Management organization within the Company's Massachusetts service  
5 territory. The positions include:

6 • One Director of Strategic Account Management – 36.23 percent of the position  
7 will be allocated to the Company;

8 • One Director of Developer Account Management and Commercial Services –  
9 40 percent of the position will be allocated to the Company;

10 • One Director of Regional Account Management – 53.55 percent of the position  
11 will be allocated to the Company;

12 • Ten Customer Account Managers – 41.65 percent of the positions will be  
13 allocated to the Company;

14 • Five DG Developer Account Managers – 100 percent of the positions will be  
15 allocated to the Company;

16 • Four Analysts for Managed Account Services – 59.5 percent of the positions  
17 will be allocated to the Company; and

18 • One National Accounts Account Manager – 47.6 percent of the position will be  
19 allocated to the Company.

20 The incremental FTEs will benefit customers and enhance customer experience by  
21 providing improved connections and interconnections assistance; education and advice on  
22 EE and clean energy solutions; opportunities to implement and use new digital solutions;  
23 and improvements to customer service.

1 **Q. What is the estimated cost of the new Customer Account Management function?**

2 A. The Company is seeking the recovery of approximately \$1.9 million in operating expenses  
3 associated with the new Customer Account Management function.

4 **Q. Why is the Company forming a new Customer Account Management function within**  
5 **its Customer organization?**

6 A. The Company's customers have reported that they need more proactive guidance and  
7 assistance on managing new interconnections, more guidance on planning for  
8 electrification of heat and transportation, and more help in resolving issues with billing and  
9 service reliability. The Company's leadership believes strongly that a more substantial  
10 investment in the Company's account management capabilities and resources is warranted  
11 for companies the size of Mass. Electric and Nantucket Electric and to provide leadership  
12 presence on the clean energy transition. In an effort to ensure that customers' voices are  
13 heard regarding their interactions with National Grid, the Massachusetts Jurisdiction is  
14 leading a corporate initiative to improve senior leadership's connection with the  
15 Company's customers and drive initiatives to improve customer experience. Over the last  
16 several months, National Grid senior leaders and group executives have met with some of  
17 the Company's large customers and developers to hear directly about their experiences  
18 with National Grid.

19 In addition, the Company performed an assessment of its account management capabilities  
20 and summarized recommendations on how the Company could effectively deploy a  
21 Customer Account Management organization to meet the evolving needs of large

1 customers and developers. The assessment included benchmarking against other utilities  
2 and indicated that National Grid was understaffed for management of large accounts and  
3 recommended that the Company form a dedicated Customer Account Management  
4 function.

5 **Q. What benefits will the new Customer Account Management function provide to**  
6 **customers?**

7 A. The new Customer Account Management function will provide tangible benefits to  
8 customers in several ways. First, the Customer Account Management organization will  
9 improve direct focus on the customer through strategic planning. In particular, the new  
10 account managers will develop and manage strategic account plans with customers to help  
11 them better achieve their objectives related to electricity consumption, service connections  
12 and expansion, and interconnections.

13 The Customer Account Management function will also increase engagement with  
14 customers on clean energy projects to drive both environmental and system benefits. In  
15 this regard, the new account managers will develop opportunities to increase large  
16 customer implementation of clean energy projects – such as EE, decarbonization,  
17 electrification, and demand response – and will work to streamline and enable DG  
18 developers to interconnect more solar resources to the distribution system.

19 In addition, the new function will improve customer satisfaction by reducing project  
20 timeframes and customer wait times. Namely, the new account managers will provide

1 proactive guidance to customers regarding alternative energy options while in the early  
2 planning stages of new electric and gas connections and DG interconnections. The new  
3 FTEs will also help customers with project portfolio management by effectively  
4 communicating with the Company's Electric Connections, Gas Connections, and Energy  
5 Integration project teams; Electric Business Unit, such as the Distribution Planning and  
6 Asset Management, Resource Planning, and Operations teams; Corporate Affairs; and  
7 other internal and external stakeholders. In this role, the account managers will serve as  
8 the customer's advocate, including as the conduit between the customer and the Company  
9 by overseeing all of the customer's interactions with the Company. The account managers  
10 will work with customers to develop strategic plans to help customers achieve their energy  
11 needs and facilitate the resolution of service issues.

12 Further, the new Customer Account Management function will facilitate executive  
13 engagement with customer needs by engaging the Company's senior leadership in direct  
14 discussions with key customers on a periodic basis to ensure the "voice of the customer"  
15 is heard.

16 Other tangible benefits of establishing the Customer Account Management function  
17 include reduced billing issues, reduced overdue billings, and reduced customer complaints.

18 **Q. Will the cost of the new hires be known and measurable by the close of the record?**

19 A. Yes. All 23 FTEs will be hired and on-site at National Grid between the filing of this case  
20 and the close of the record in the proceeding. The Company will supplement the record

1 periodically to demonstrate the FTEs hired and on-site prior to the close of the record.  
2 Therefore, by the close of the record, all costs associated with the new hires will be known  
3 and measurable to include in rates.

4 **Q. Does the incremental increase in staff to support the Customer Account Management**  
5 **organization reflect the normal ebb and flow of staffing?**

6 A. No. The incremental increase in staff is outside the normal ebb and flow of staffing based  
7 on a permanent change to the Company's structure and the significant percentage increase  
8 in FTEs. This new headcount will result in an increase of approximately 164 percent over  
9 current account management employees within the Customer organization.

10 **Q. Does the addition of incremental staff for the Customer Account Management**  
11 **organization reflect a permanent change to the structure of the Customer**  
12 **organization?**

13 A. Yes. Before this initiative, National Grid did not have a Customer Account Management  
14 organization within its broader Customer organization. The addition of the proposed  
15 Customer Account Management function and the accompanying incremental 23 FTEs to  
16 serve in the account manager and higher management roles represents a permanent  
17 organizational change to the structure of National Grid's Customer organization that it has  
18 not previously had, and that is intended to be a lasting solution to evolving specialized  
19 service needs for the types of customers it serves.

20 The Company's large customers and developers are faced with a rapidly evolving set of  
21 choices related to energy infrastructure planning and clean energy project development.

1 Customers need more guidance and oversight on adding new and expanded electric service  
2 as they plan for electrifying their heat and transportation. Clean energy developers are  
3 seeking more of a strategic and collaborative relationship with the Company as they look  
4 to grow their portfolios of clean power generation and community solar customers. The  
5 expanded account management function will provide the necessary support to large  
6 customers and developers during the clean energy transition over the next several years.

7 **Q. Does the addition of incremental employees for the Customer Account Management**  
8 **organization reflect a significant percentage increase over Test Year FTEs?**

9 A. Yes. The incremental increase of FTEs represents an increase of approximately 164  
10 percent over the FTEs in the account management function within the Customer  
11 organization during the Test Year. The Company currently has seven customer account  
12 managers, one DG developer account manager, two national accounts account managers,  
13 and four managed account services analysts in the Customer organization. Therefore, the  
14 proposed increase of 23 FTEs dedicated to the Account Management function would be a  
15 significant increase over the Test Year FTEs.

16 **Q. Are there any other circumstances that warrant a departure from the Department's**  
17 **traditional standard regarding post-test year hires?**

18 A. Yes. As described in more detail in the pre-filed direct testimony of the CPI Plan Panel,  
19 Exhibit NG-CPIP-1, the Company is about to commence unprecedented levels of capital  
20 investment needed to support its core obligations to provide safe and reliable electric  
21 distribution service to customers and also to support its investments that address the

1 Commonwealth's electrification and clean energy goals and expectations through the  
2 ESMP. The account managers in the Customer Account Management organization will  
3 provide a direct contact for customers to engage during the clean energy transition and  
4 facilitate opportunities to increase clean energy projects for larger customers.

5 **VI. Proposed Electrification Pricing**

6 **Q. Is the Company proposing any new customer rate design options given the clean**  
7 **energy and electrification goals in Massachusetts?**

8 A. Yes. The Company is working to drive towards the Commonwealth's electrification and  
9 clean energy goals and expectations articulated in the Clean Energy and Climate Plan for  
10 2050, which focuses on heat electrification as the primary strategy for achieving a 93  
11 percent reduction in GHG emissions from the buildings sector by 2050. This will involve  
12 unprecedented levels of customer investment in building retrofits and new technologies,  
13 such as heat pumps, to replace traditional fossil fuel-fired heating systems, and will  
14 necessitate a broad portfolio of mechanisms to overcome current affordability barriers to  
15 electrification, including incentives and financing options, as well as changes to rate  
16 design.

17 One barrier to electrification affecting residential customers in particular involves how  
18 customers are currently charged for their use of the electric distribution system. Currently,  
19 the Company's residential customers are charged on a volumetric, or per kWh, basis for  
20 their use of distribution system infrastructure. However, these distribution system costs are  
21 fixed, driven by customer maximum demands, or driven by customer demand coincident

1 with delivery system peaks. Volumetric delivery charges are, therefore, not cost-reflective  
2 and result in uneconomic and unfair cross subsidies, where one group of customers pays  
3 more than their contributions to system costs while others pay less. Under volumetric  
4 delivery rates, customers with relatively high volumetric consumption and relatively low  
5 non-coincident and coincident peak demands pay in excess of their contribution to system  
6 costs. The result is uneconomic and often prohibitively high operating costs for heat  
7 electrification and other high throughput beneficial technologies, which creates a barrier to  
8 their adoption by customers.

9 The Company has long understood that cost-reflective new rate designs for residential  
10 customers will play a critical role in removing affordability barriers to electrification,  
11 though current metering technology places significant limitations on how residential  
12 customers can be charged for their use of the system. The Company's AMI deployment  
13 plan, expected to be completed in late 2027, will enable implementation of innovative time-  
14 varying and demand-based rate designs for residential customers that will send efficient,  
15 grid-beneficial price signals, reduce the operating costs of electric heat and electric vehicle  
16 ("EV") charging, and improve overall fairness across customers and their end uses.

17 The Company recognizes, however, that achieving the Commonwealth's electrification  
18 goals requires that action be taken as soon as possible to provide customers with rate design  
19 options for enabling electrification. As an immediate first step in addressing these  
20 concerns, the Company is proposing that the Department approve in this proceeding a new

1 “Electrification Pricing” option for residential customers. This proposed pricing option  
2 will be open to all Rate R-1 customers on an opt-in basis. Under Electrification Pricing,  
3 the Rate R-1 base distribution charge will be fixed, rather than charged on a per kWh basis.  
4 All other charges applicable to Rate R-1 customers – including the customer charge, all  
5 surcharges and adjustment factors included in the distribution line item on the bill,  
6 transition charge, EE charge, renewables charge, distributed solar charge, EV program  
7 factor, transmission charge, and basic service supply or competitive supply charges – will  
8 be assessed in the same manner as applicable to the default Rate R-1.

9 **Q. How did the Company determine the proposed fixed base distribution charge for the**  
10 **Electrification Pricing option?**

11 A. The proposed fixed distribution charge is based on a simple conversion of the target  
12 residential base distribution revenue target from dollars per kWh to dollars per bill.  
13 Whereas the Rate R-1 per kWh distribution charge of \$0.06647 is determined by dividing  
14 the balance of the residential revenue target after applying the fixed customer charge of  
15 \$11.00 by the residential kWh for the test year, for the proposed Electrification Pricing, the  
16 balance of the revenue target after applying the fixed customer charge of \$11.00, is divided  
17 by the number of residential bills in the test year, to arrive at \$38.15 per month. The  
18 calculation used to determine the proposed fixed base distribution charge is described in  
19 the pre-filed direct testimony of the Pricing Panel, Exhibit NG-PP-1, and the calculations  
20 are shown on Exhibit NG-PP-6, page 3.

1 **Q. Why is the Company proposing Electrification Pricing in this proceeding?**

2 A. As the Company recently expressed in the EV Time of Use (“TOU”) Rate filing in docket  
3 D.P.U. 23-85, and the Company’s proposed ESMP submission to the Grid Modernization  
4 Advisory Council (“GMAC”), the Company’s long-term rate design strategy seeks to move  
5 toward more cost-reflective, equitable, and grid beneficial rate designs. Advancing  
6 innovative rate design is necessary to enable the Commonwealth’s goals for clean energy  
7 and electrification in a manner that is fair and affordable for all customers. Realization of  
8 this long-term strategy will require AMI to enable development and implementation of  
9 time-varying and demand-based rate designs. Full scale deployment of AMI is scheduled  
10 to be completed in late 2027.

11 The Company’s primary objective in proposing the Electrification Pricing option is to  
12 begin supporting electrification and providing benefits to customers while AMI  
13 deployment is still underway and while options for innovative rate design remain limited  
14 by current metering technology. In addition to providing near-term benefits, introducing  
15 an opt-in alternative rate design will allow for gradualism over the longer term and provide  
16 insight for development and implementation of future innovative rate designs.

17 **Q. Does the Company expect that the proposed Electrification Pricing option will**  
18 **provide savings to customers?**

19 A. Yes. Compared to the default Rate R-1, residential customers with higher volumetric  
20 energy use than the average residential customer usage of 574 kWh per month, including  
21 customers who use electric heat pumps and other high throughput technologies, will save

1 money under the proposed Electrification Pricing option. Estimated savings relative to  
2 Rate R-1 are meaningful, but modest, as the per kWh base distribution rate constitutes just  
3 19 percent of total volumetric charges, which also includes supply charges, transmission  
4 charges, and all surcharges and adjustment factors applied to the base distribution rate.  
5 Residential customers with average monthly usage of 700 kWh, would save an estimated  
6 3 percent, or \$101, on their total annual bill on the proposed Electrification Pricing,  
7 assuming the current Basic Service rate, transmission rate, surcharges, and adjustment  
8 factors. Residential customers with higher monthly usage, including electric heating  
9 customers, will save more. Based on sample load profiles, the Company's analysis shows  
10 a customer using a three-ton Air Source Heat Pump ("ASHP") with average monthly usage  
11 of 1,107 kWh could save approximately 9 percent, or \$425, on their total annual bill as  
12 compared to Rate R-1. All else equal, a customer using a five-ton ASHP with average  
13 monthly usage of 1,462 kWh could save approximately 11 percent, or \$709, per year on  
14 their total bill. Customers relying on other high throughput electric technologies, such as  
15 at-home EV chargers and electric resistance heating, are also likely to save by opting into  
16 Electrification Pricing. Bill savings comparisons for these example customer load profiles  
17 are shown in the Table 2, below:

**Table 21 – Savings from Electrification Pricing  
 Relative to Default Rate R-1 for Three Example Customer Profiles**

<b>Example Customer Usage (average annual kWh per month)</b>	<b>Default Rate R-1 Average Total Monthly Bill (\$)</b>	<b>Electrification Pricing Average Total Monthly Bill (\$)</b>	<b>Percent Savings from Electrification Pricing</b>
700 kWh	\$256	\$247	3%
1,107 kWh (average residential customer usage plus 3-ton ASHP)	\$398	\$363	9%
1,462 kWh (average residential customer usage plus 5-ton ASHP)	\$522	\$463	11%

**Q. How does the Company propose to recover any revenue shortfall that may result from Electrification Pricing customer savings?**

**A.** Because Electrification Pricing will be offered as a policy-driven pricing option under the existing Rate R-1 rate class, savings to customers who opt in will be recovered through the Revenue Decoupling Mechanism (“RDM”) and allocated to each rate class according to the appropriate distribution revenue allocators. Assuming 60.6 percent of savings from Electrification Pricing is allocated to the Rate R-1 and Rate R-2 rate classes, and assuming 100 percent of all customers with greater than average monthly usage opt into Electrification Pricing, a Rate R-1 customer with average monthly usage of 600 kWh will

1 experience a 4.1 percent, or \$108, increase to their total annual bill, all else equal. This  
2 estimated bill increase to customers with average consumption represents an upper bound,  
3 because it is unlikely that 100 percent of customers with the potential to save any amount  
4 – about 37 percent of all residential customers – will opt into Electrification Pricing. If 30  
5 percent of all customers with the potential to save opt into Electrification Pricing, a Rate  
6 R-1 customer with average monthly usage of 600 kWh will experience a 1.2 percent, or  
7 \$32, increase to their total annual bill, all else equal.

8 Notwithstanding the potential bill impact on non-participating customers, the purpose of  
9 the Electrification Pricing proposal is to encourage adoption and use of heat electrification  
10 technologies by making it more economical to do so, in support of the Commonwealth's  
11 electrification goals.

12 **Q. Who is eligible to opt-in to the proposed Electrification Pricing option?**

13 A. All customers receiving service under Rate R-1 are eligible to select Electrification Pricing.  
14 Customers who opt into Electrification Pricing must remain enrolled for a minimum of 12  
15 billing cycles before returning to default Rate R-1 pricing. Customers who return to default  
16 Rate R-1 pricing are eligible to opt back into Electrification Pricing after 12 billing cycles.

17 **Q. What is the relationship between the proposed Electrification Pricing and the**  
18 **proposed Rate R-2 Low-Income Discount?**

19 A. The Company proposes to initially implement the Electrification Pricing option under Rate  
20 R-1 only. Once implemented, the Company plans to assess the effectiveness of, and

1 customer response to, the pricing option and determine whether and how to expand  
2 eligibility to customers taking service under Rate R-2.

3 Customers taking service under Rate R-2 may choose to switch to Rate R-1 and opt into  
4 Electrification Pricing if they believe their savings and benefits from Electrification Pricing  
5 will be greater than those they would receive from the Rate R-2 Low-Income Discount.  
6 This is unlikely to be the case for the vast majority of eligible customers, however, because  
7 the 32 percent total bill discount under Rate R-2 significantly exceeds the maximum  
8 possible savings from Electrification Pricing for even the highest usage residential  
9 customers. As the Company progresses its rate design approach in the coming years with  
10 the data available from AMI deployment, the intention is to enable provision of innovative  
11 rates that work together with new and existing low-income programs to provide the most  
12 benefit for customers.

13 While the proposed Electrification Pricing option will not be initially available to  
14 customers taking service under Rate R-2, the Company's EE programs support  
15 affordability of electrification for customers who qualify for the Low-Income Discount.  
16 Any Rate R-2 customer who heats with electric resistance or a deliverable fuel, and resides  
17 in a dwelling where a heat pump can safely and effectively be utilized to heat that dwelling,  
18 can receive a heat pump at no cost to them, delivered through the income-eligible EE  
19 programs.

1 **Q. Have other public utilities implemented similar electrification rates?**

2 A. Yes. A handful of other U.S. public utilities have implemented rate designs to lower the  
3 costs of electric heating or leveled costs to reduce the shock from winter bills, including  
4 Maine, New York, Michigan, California, Minnesota, Pennsylvania, Delaware, and South  
5 Dakota. Some of these rates are designed specifically for electric heating and may require  
6 customer affirmation that specified electric heating technologies are in use, while others  
7 are technology neutral and marketed more generally to homes with electric heat and EVs.  
8 These rates are generally opt-in rates, like the Company's Electrification Pricing proposal,  
9 and include one or more of the following elements: (a) seasonal differentiation in  
10 volumetric rates, with modestly to dramatically lower kWh costs in the winter, either as a  
11 seasonal rate or a flat winter credit or discount; (b) increased fixed charges to allow for a  
12 lower volumetric rate; (c) TOU components that allow a significant portion of heat pump  
13 usage to fall into lower cost off-peak hours; or (d) declining block structures or the  
14 elimination of inclining block structures to reduce disincentives for higher electric demand.  
15 Rates differ in their scope of coverage.

16 **VII. Conclusion**

17 **Q. Does this conclude your testimony?**

18 A. Yes.
